

Utility advisory, personally delivered.

Twenty years of substation, distribution, asset management, NERC compliance and grid modernization experience. Clients work with the practitioner, not a staffing layer.

Electric Cooperatives

Municipal Utilities

Investor-Owned Utilities

G&T Organizations

01 Power Delivery Engineering

- Substation design & equipment specification
- Protection & control engineering
- Distribution system engineering & design
- Distribution protection coordination & settings
- Storm hardening & resiliency programs
- Voltage conversion program engineering
- Power quality programs & diagnostics

02 Asset Management & Capital Planning

- Substation & distribution condition assessment
- Failure mode & effects analysis (FMEA)
- Reliability analysis & improvement programs
- Capital improvement program (CIP) development
- Economic analysis & business cases
- Risk-based investment prioritization
- Transformer fleet management & diagnostics

03 Grid Strategy & Compliance

- NERC PRC-005 programs & audit readiness
- Ongoing NERC compliance program management
- Distribution & transmission strategic planning
- Regulatory compliance mapping & standards

04 Advisory & Training

- AI & digital transformation advisory
- Digital engineering & compliance tools
- Field operations technology
- Substation & protection engineering training
- NERC training & knowledge transfer

Engagement formats

- Fixed-price studies & assessments
- Technical training & workforce development

- Multi-phase capital & compliance programs
- Owner's engineering & program management

- Monthly advisory retainers
